

SPECIFICATION DOCUMENT – VERSION 1.0

GNIE Aesthetics.

Premium bilingual showcase website — 12 machines, one purpose:
turn clinic owners into conversations.

CHAPTER ONE

What we are building

A **premium showcase website** for GNIE — distributor of professional aesthetic equipment in Tunis — replacing the current single-page site with twelve dedicated machine pages, in French and English.

The machines sell between €15,000 and €30,000. The site's job is not to explain wavelengths; it is to make a clinic owner feel that this equipment is worth its price, and to put a contact button within reach at every scroll position. **One converted lead pays for this website many times over.**

WHO VISITS

Owners and managers of aesthetic clinics, medspas and beauty institutes — Tunisia first, francophone Africa second. Business decision-makers, not technicians. They buy outcomes, ROI and trust, so the site leads with results and keeps the engineering in an expandable spec table for those who want it.

THE SINGLE GOAL

Qualified leads through exactly two channels: a **WhatsApp** conversation pre-filled with the machine's name, or a **quote request** form with that machine pre-selected. No prices anywhere — the business is quote-driven.

AT A GLANCE

Machines	12	Pages built	≈ 34	Server	None (static)
Categories	7	Content files	24	JavaScript	< 30 KB
Languages	FR · EN	Images curated	43	Hosting cost	€0

WHAT THIS SITE IS NOT

No online shop or checkout · no prices · no user accounts · no blog · no admin panel to maintain · no database to back up. Every one of those is a cost and a risk that a lead-generation brochure does not need. The architecture leaves the door open (see chapter 08) without paying for it now.

HOW TO READ THIS DOCUMENT

01 · The project	02	07 · Design system	09
02 · Decisions already taken	03	08 · Content & how you edit it	10
03 · Answers we need from GNIE	04	09 · Leads & foundations	11
04 · Structure & the twelve machines	05	10 · Build plan	12
05 · The machine page	07	11 · Quality & risk	13
06 · Catalogue, home, contact	08		

CHAPTER TWO

Decisions already taken

Each decision below is settled and reflected in the plan. If you disagree with any of them, changing it now costs minutes; after the phase that builds on it, hours.

#	DECISION	CHOICE	REASON
D1	Catalogue scope	12 machines (CDC said 7)	Client confirmed all 12 brochures are catalogue machines
D2	Categories	7 — the CDC's six plus <i>Épilation Définitive</i>	The two hair-removal machines needed a home
D3	Featured on home page	Cryolipolyse 7D · V-Shape Platinum · VISBODY M30	Flagship spread: fat freezing, body contouring, 3D analysis
D4	Home hero visual	Machine photography on the dark ground	Sells the equipment from the first second
D5	Analytics	Vercel Web Analytics	Free, cookieless, ~1.5 KB; counts visitors, top machines, and clicks on WhatsApp / quote buttons
D6	Phase review method	Screenshots in chat <i>and</i> you run the site locally	No extra accounts, real device testing
D7	Missing spec values	Hidden on the live site, tracked in a gap list	A visitor must never see a placeholder
D8	Source brochures	Archived in the repository, excluded from the built site	Traceability without page weight
D9	Logo	Gold logo extracted from the catalogue at 300 dpi	Usable now; original file still awaited
D10	Language routing	French at the root, English under <code>/en/</code>	Primary market is francophone; concentrates search authority on the French pages
D11	Editorial rules	No invented data · no prices · no medical claims	These are professional aesthetic devices, not medical treatments — protects GNIE legally and commercially

CHAPTER THREE

Eight answers we need from GNIE

Nothing here blocks the next phase — but every unanswered item eventually becomes visible on a page. Answers can arrive one at a time.

01 · Is the machine called EMS 16 or NEO?

The manufacturer's manual is titled "NEO use manual"; your catalogue calls it EMS 16. The site currently says EMS 16.

02 · Which brand for the Hydrafacial?

The technical brief says BEAUTICIAN/NEO, but the brochure shows **PZLASER** printed on the device itself, and "Hydra Star" in its testimonials. The site currently says PZLASER.

03 · Does GNIE actually distribute the HOWBODY H6?

Its brochure is co-branded by **HBEC (hbec.tn)** — another Tunisian distributor. All HBEC branding has been stripped from the content and even from the product photo, but the machine's presence on the site should be confirmed.

04 · Exact model name of the Électrolyse 5-en-1?

Its two-page brochure only prints "5 IN 1 Permanent". A precise commercial name would improve both the page and its search visibility.

05 · Which brands appear in the home-page brand strip?

Confirmed so far: PZLASER, VISBODY. Pending: BEAUTICIAN/NEO (see 02) and HOWBODY (see 03).

06 · What exactly does GNIE commit to after the sale?

Installation, training, local after-sales service — the precise wording appears in the reassurance line under *every* machine's call to action, so it must be accurate.

07 · Are these the current contact details?

Found in the catalogue: Imm Emmeraude de Tunis, Rue Mohamed Badra, Bureau A-2-8, Montplaisir, Tunis 1073 · 55 157 506 / 90 157 560 · grtarek@yahoo.fr. Opening hours still needed.

08 · Seventeen technical values and two product photos

Five brochures carry no specification table, so values such as power draw, dimensions and weight are missing. V-Shape Platinum and Électrolyse 5-en-1 also need a clean product photograph. Full list in the Phase 0 report.

CHAPTER FOUR

Every page, every machine

SITE MAP

FRENCH (DEFAULT) → ENGLISH TWIN

Home / → /en/

Catalogue /machines/

Machine page ×12 /machines/{slug}/

Contact /contact/

Legal notice /mentions-legales/

Privacy /confidentialite/

Not found /404 · bilingual

Roughly 34 pages in total. Every French page has an exact English counterpart at the same slug, so the language switcher always lands on the same machine — never back on the home page.

THE THREE FEATURED MACHINES

CRYOLIPOLYSE

CRYOLIPOLYSIS 7D 360° · PZLASER

REMODELAGE CORPOREL

V-SHAPE PLATINUM 5-EN-1 · PZLASER

ANALYSE & DIAGNOSTIC

VISBODY M30 · 3D BODY SCANNER

THE TWELVE MACHINES, IN CATALOGUE ORDER

One catalogue, seven categories

#	MACHINE	CATEGORY	BRAND	CONTENT
01	Ultra Picolris — picosecond laser	Laser pigmentaire & détatouage	PZLASER	Complete
02	Cryolipolysis 7D 360° ★	Cryolipolyse	PZLASER	Complete
03	V-Shape Platinum — 5-en-1 ★	Remodelage corporel	PZLASER	4 specs missing
04	Hydrafacial 10-en-1	Soin du visage	PZLASER†	Complete
05	3-en-1 Air Presso	Pressothérapie & drainage	—	3 specs missing
06	EMS 16† — sculpting musculaire	Remodelage corporel	—	Complete
07	VISBODY M30 — 3D scanner ★	Analyse & diagnostic	VISBODY	Complete
08	Laser CO2 fractionné	Laser pigmentaire & détatouage	—	Complete
09	EosICE Pro Max — diode 4 λ	Épilation définitive	PZLASER	5 specs missing
10	Électrolyse 5-en-1†	Épilation définitive	—	3 specs missing
11	Skin Analyzer Q2 — 3 caméras	Analyse & diagnostic	—	2 specs missing
12	HOWBODY H6†	Analyse & diagnostic	HOWBODY	Complete

★ featured on the home page · † subject to an open question in chapter three. "Complete" means every field the brochure could fill is filled — French and English both written.

THE SEVEN CATEGORIES

Laser pigmentaire & détatouage (2) · Cryolipolyse (1) · Remodelage corporel (2) · Soin du visage (1) · Pressothérapie & drainage (1) · Épilation définitive (2) · Analyse & diagnostic (3).

WHERE THIS CONTENT CAME FROM

Twelve manufacturer brochures, read page by page — three of them image-only, so their pages were rendered and read visually. Nothing on these pages is invented: every specification, benefit and zone traces back to a printed source, and anything the brochures did not state is recorded as a gap rather than guessed.

CHAPTER FIVE

The machine page, section by section

One template renders all twelve machines from their content files. The order is fixed and engineered for a non-technical buyer: *outcomes first, proof in the middle, engineering on demand, contact everywhere*.

01 Breadcrumb

Accueil / Machines / {machine}. Small and quiet, but it tells search engines how the site is organised.

02 Hero

Category label, the machine's name in large serif type, a one-sentence value proposition, and the two buttons that matter – gold *Demander un devis* and outlined *WhatsApp*. Product image framed to the right, stacking above the text on phones.

03 Pourquoi cette machine – three to six benefit cards

Outcome language only: what the clinic gains, not how the electronics work. This is the section that sells.

04 Zones & indications

Treatment areas as gold-outlined chips – double menton, abdomen, flancs, cuisses. For the three analysis devices these become measurement capabilities instead. If a machine has none, the section disappears rather than showing an empty shell.

05 La technologie – one to four plain-language blocks

How it works, explained for an owner evaluating an investment. Jargon stays in the spec table below.

06 Caractéristiques techniques – the plaque

The signature device: specifications presented as an engraved metal plate, grouped by theme. On phones each group collapses, the first one open. Values still missing are simply not shown.

07 Gallery

Only appears when the machine has at least two more clean images. A quiet grid – no slideshow, no lightbox.

08 Call to action

Full-width band: « *Intéressé par la {machine} ?* », the reassurance line about installation, training and after-sales, and both buttons again. The quote button carries the machine's identity to the contact form, which pre-selects it.

09 À découvrir également

Two related machines, already chosen for all twelve – keeps a visitor moving through the catalogue instead of leaving.

WHY THIS ORDER CONVERTS

A clinic owner scanning the page gets the promise in the first screen, the reasons to believe in the second, and a contact button no matter where they stop reading. The technical detail sits low on the page where it reassures the diligent buyer without slowing down the impatient one.

CHAPTER SIX

Catalogue, home, contact

Catalogue — /machines/

A title, a single line of introduction, then a filter bar of eight pills — *Toutes* plus the seven categories — above a grid of twelve cards. Each card carries the product image, its category, name, a one-line summary, one key specification, and *Découvrir* →.

Filtering is instant and the active filter is written into the address bar, so a filtered view can be shared: you can send a clinic a link that opens directly on the two hair-removal machines. With JavaScript disabled, all twelve simply show.

Home — /

- **Hero** — GNIE's positioning headline over a strong machine visual, with *Découvrir nos machines* and WhatsApp.
- **Categories strip** — the seven categories as tiles, each opening the catalogue already filtered.
- **Featured machines** — the three flagships as large cards.
- **Pourquoi GNIE** — three or four trust points: official distributor, installation and training, local after-sales, international brands.
- **Brands strip** — brand names set in type rather than low-resolution logo scrapes.
- **About GNIE** — a compact company block: Montplaisir, Tunis; active since 2015.
- **Final call to action** — both contact channels plus the newsletter signup.
- *No sliders, no autoplay, no stock-photo carousel.* The restraint is the luxury.

Contact — /contact/

Coordinates on the left — address, phone, email, WhatsApp, hours. The quote form on the right: name, establishment, phone, email, machine concerned (a dropdown of all twelve plus *Autre demande*, pre-selected when the visitor arrives from a machine page) and a message. It posts by email through Formspree, works even with JavaScript switched off, and a hidden decoy field absorbs spam bots. Below, the Google map loads only when scrolled to, so it never slows the page down.

Legal, privacy, 404

Standard French legal notice and privacy policy drafted for a Tunisian company — the privacy page names every third party the site touches: Formspree, Brevo, Google Maps and Vercel Analytics. The 404 page is bilingual and on-brand, offering both home pages rather than a dead end.

CHAPTER SEVEN

Instrument de précision

The direction: the restraint of a Swiss watch specification sheet crossed with the warmth of a Tunis luxury institute. Gold on black is fixed by the GNIE logo — and gold on black is exactly how cheap nightclub templates look, so the system is built on discipline. *This document you are reading uses that system.*

PALETTE — ONE GOLD, NEVER NEGOTIABLE

					
NOIR #0B0B0D	GRAPHITE #131316	CARBONE #1C1C21	OR #C9A24B	OR CLAIR #E9D5A1	IVOIRE #F3EEE4

Never pure black — **#0B0B0D** has depth. Gold is reserved for headings, eyebrow labels, hairlines and buttons; **body text is always ivory, never gold**. Contrast passes accessibility standards at every combination used.

TYPOGRAPHY

Cryolipolysis 7D 360°

Cormorant Garamond 600 — machine names, page titles.

Traite quatre zones simultanément en quarante minutes.

Manrope 400/500/700 — everything else.

CRYOLIPOLYSE — REMODELAGE

The eyebrow: the system's recurring motif, above every section title.

COMPONENTS

Double menton

Abdomen

Flancs

Cuisses

Demander un devis

WhatsApp

ÉNERGIE

Refroidissement −11 °C

Applicateurs 7 tailles

The **plaque technique** — the site's one memorable device, repeated in miniature on catalogue cards so everything reads as one family.

MOTION & RESTRAINT

One fade-up as a section enters view, a gold underline sliding on menu hover, a two-percent lift on card hover. Corners are nearly sharp — two pixels. Nothing autoplays, nothing parallaxes, nothing carousels. Every animation switches off automatically for visitors whose device asks for reduced motion.

CHAPTER EIGHT

How the content works — and how you change it

Every machine is a pair of plain text files, already written. Nothing is buried in the design: components display what the files contain, and never contain sentences themselves.

```
src/content/machines/fr/cryolipolyse-7d-360.md ← French version
src/content/machines/en/cryolipolyse-7d-360.md ← English version
src/assets/machines/cryolipolyse-7d-360/ ← its images
```

Each file holds the name, brand, category, tagline, benefits, treatment zones, technology blocks, specification table, related machines and search text. Interface labels — menu items, button text, form fields — live in a single dictionary with a French and an English column.

WHAT THIS MEANS IN PRACTICE

- **Correct a specification:** edit one line in two files.
- **Swap a product photo:** drop the new file in the machine's folder, change one line.
- **Add machine number thirteen:** two content files and an image folder. Catalogue, filters, sitemap and related-machine links pick it up by themselves.
- **Retire a machine:** delete two files.

WHAT CANNOT GO WRONG

- **Malformed content cannot ship.** The build refuses to run on a missing benefit, a category typo, or an over-long search title.
- **Missing data cannot embarrass you.** Values still unknown are hidden rather than printed as placeholders.
- **A missing translation is an error,** not a page that silently switches language.
- **The French and English versions cannot drift apart** structurally — parity is checked.

LATER, IF GNIE WANTS TO EDIT CONTENT THEMSELVES

A free visual editor (Decap CMS) can be layered on top of these exact files — a login page where the client edits machines in a form, with no developer involved and no rebuild of the site. This is precisely why the content lives in flat files rather than a database. Parked as a future option, costing nothing today.

CHAPTER NINE

How a visitor becomes a lead

CHANNEL ONE · WHATSAPP

A floating button on every page, bottom right. On a machine page the conversation opens already written: « *Bonjour, je souhaite plus d'informations sur la Cryolipolyse 7D 360°.* » — so GNIE knows instantly which machine the lead is about, in the visitor's own language.

CHANNEL TWO · QUOTE REQUEST

Every *Demander un devis* button lands on the contact form with that machine already selected in the dropdown. The submission arrives by email. No account, no login, no friction — and it works without JavaScript.

Supporting these: a newsletter signup in the footer for long decision cycles, and analytics counting visitors, most-viewed machines, and clicks on both channels — so after launch you can see *which machines attract interest* before anyone even writes.

TECHNICAL FOUNDATION

LAYER	CHOICE	IN PLAIN TERMS
Framework	Astro 5, fully static	The site is pre-built into plain HTML files — nothing to hack, nothing to crash, instant to load
Styling	Tailwind CSS 4 + tokens	One file defines the gold, the spacing and the type scale for the whole site
Content	Text files + validation	Human-editable, machine-checked
Images	Astro image pipeline	Automatically converted to modern formats, correctly sized, loaded as needed
Fonts	Self-hosted woff2	No external request, no text jumping as the page loads
Hosting	Vercel, free tier	Global delivery network, HTTPS, republished on every save to the repository
Domain	GoDaddy DNS → Vercel	gnie-aesthetics.com, already owned

Form · newsletter · chat Formsfree · Brevo · WhatsApp No server to maintain, no monthly bill at this volume

Identifiers and keys are configured in Vercel, never written into the code. If one is missing when the site builds, that block renders in a safe disabled state instead of breaking the page.

THE FOUR VALUES NEEDED AT DEPLOYMENT

Formsfree ID	quote requests
WhatsApp number	chat buttons

Brevo form URL	newsletter
Site address	sitemap, sharing

CHAPTER TEN

Four phases, four review gates

Phase 0 is already delivered: twelve brochures audited and mapped, 24 content files written and validated, 43 images curated, the gold logo recovered, and a gap report produced. What follows builds the site around that content.

01 Skeleton & design system
Astro configured for two languages, all design tokens, the base layout with header, footer, language switcher and WhatsApp button — plus a hidden styleguide page showing every component. *Accepted when* both languages render, the switcher works, and the empty shell scores 95+ on Google's performance audit. **YOUR REVIEW**

02 Machine pages & catalogue
First the complete machine template with **one machine only** — Cryolipolyse 7D, the richest content — as the reference for design review. **YOUR REVIEW** Then all twelve plus the filtered catalogue. *Accepted when* all 24 machine pages build, related links resolve, spec plates collapse properly on phones, and filtered views are shareable. **YOUR REVIEW**

03 Home, contact, legal, 404
Accepted when the form delivers to a test inbox, machine pre-selection works from every machine page, and both languages are complete. **YOUR REVIEW**

04 Search visibility, integrations, quality assurance
Structured data validated with Google's own tools, language pairs verified, social-share images generated, analytics wired, performance pass, then a full sweep: every internal link, French/English parity page by page, 360-pixel screens, keyboard-only navigation, reduced-motion. *Delivered with* a QA report and a step-by-step deployment guide including the exact GoDaddy DNS records. **FINAL REVIEW → LAUNCH**

HOW YOU REVIEW EACH PHASE

Desktop and phone screenshots posted in the chat — and the site running on your own machine, so you can click it, resize it, and test it on your phone.

```
git clone .../gnie.git
cd gnie
npm install
npm run dev # localhost:4321
```

CHAPTER ELEVEN

What "finished" means, measurably

PERFORMANCE & ACCESSIBILITY

- 90+ on all four Google Lighthouse categories, on a throttled mobile connection, for the home page, the catalogue and a machine page
- No layout shifting as the page loads
- No horizontal scrolling at 360 pixels wide
- Fully operable by keyboard, with visible gold focus outlines
- Touch targets at least 44 pixels
- Colour is never the only way meaning is conveyed

SEARCH VISIBILITY

- A unique title and description per page, written in the content files
- Structured data: organisation, product (without prices), breadcrumb
- Language pairs declared on every page, French as the default
- XML sitemap, robots file, canonical addresses
- A share image per page for WhatsApp, Facebook and LinkedIn previews
- Descriptive alternative text on every content image, in both languages

RISKS, AND WHAT ABSORBS THEM

RISK

HOW IT IS HANDLED

Manufacturer images are mediocre
— artefacts, text baked in

Heroes already re-cropped from the brochures at high resolution; two machines flagged for client photography; swapping a photo is a one-line change

Gold on black drifts into "nightclub"

Tokens permit one gold, used only for accents; body text always ivory; whitespace and hairlines carry the luxury

Two machines have thin brochure content

Their pages render fully with what exists; unknown values hidden; the gap list drives client follow-up

Brand confusion — HBEC brochure, PZLASER versus BEAUTICIAN

Raised as open questions; HBEC branding already stripped from all text and images

A later content edit breaks the site

Validation refuses malformed content at build time — broken data cannot reach the public site

Free hosting carries no formal service guarantee

Accepted at this traffic level; because the site is static files, moving it anywhere takes minutes

NEXT STEP

Read this document and say **"go Phase 1"** — or ask for any change first; edits now cost minutes. The eight open questions in chapter three can be answered whenever GNIE is ready; none of them holds up the next phase.
